

anypercent website build log (tutorial)

0) Goal

Build a site inspired by makehastecorp style with:

- portfolio-first presentation
- small product sales section
- scalable modern stack

1) Stack decision

****Chosen stack:**** Next.js (App Router) + Tailwind CSS + TypeScript

Why

- Great SEO for portfolio discoverability
- Fast and modern UI performance
- Easy to grow from portfolio into product pages/checkout later
- Component-based structure for clean iteration

2) Site structure (blueprint)

Core pages (v1)

1. `/` Home (hero + featured work + products + contact)
2. `/work` Portfolio index
3. `/work/[slug]` Case study pages
4. `/shop` Product listing
5. `/about` Brand story + capabilities
6. `/contact` Contact form and booking CTA

Homepage sections

1. ****Header/Nav****: logo, work/shop/contact
2. ****Hero****: strong positioning line + short value proposition
3. ****Featured Work Grid****: 3 cards (services/case studies)
4. ****Small Products Section****: 3 digital products with price + buy CTA
5. ****Contact Footer CTA****: collaboration email

3) Visual style system

Direction (inspired by reference vibe)

- Dark, high-contrast minimalism
- Tight spacing rhythm
- Lowercase typography accents
- Editorial hierarchy (big hero, compact body)
- Subtle borders/glass cards instead of heavy shadows

Tokens (v1)

- `bg`: `#0a0a0a`
- `text`: `#f4f4f5`
- `muted`: zinc-300/400/500 scale
- radius: `xl/2xl`
- border alpha: `white/10` and `white/15`

Typography

- System sans stack with Inter-first tone
- Hero: 4xl to 6xl responsive
- Body: 14–16px range for calm readability

4) What we implemented right now

Scaffold

```
```bash
npx create-next-app@latest anypercent --ts --tailwind --eslint --app --src-dir --import-alias "
@/*" --use-npm --yes
```
```

Built homepage in:

- `src/app/page.tsx`

Updated base styling in:

- `src/app/globals.css`

Features now live:

- Brand: `anypercent`
- Portfolio-oriented hero
- Featured work cards
- Product cards with mock pricing and buy buttons
- Contact CTA section

5) Next steps (recommended)

1. Add real portfolio case studies (`/work/[slug]`)
2. Connect buy buttons to Stripe Payment Links or Gumroad
3. Add subtle motion (fade/slide on scroll)
4. Set metadata/OG image/favicon
5. Deploy on Vercel

6) PDF tracking

This tutorial file is the source of truth. We will keep updating it and regenerate PDF snapshots as the project evolves.
